Base model (ESM-2)
Fine-tuned on influenza HA
Accessibility alone
A
Spearman correlation
PLM score vs observed frequency,
all possible AA replacements
Spearman r
α = 0
no relationship = 0
B
AUROC
Binary prediction: AA
replacement observed or not
AUROC
α = 0
chance = 0.5
C
Pearson correlation
PLM score vs observed frequency,
observed AA replacements only
Pearson r
α = 0
no relationship = 0
Weight on mutational accessibility (α); 0 = model alone, negative = accessibility divided out
